Emotions – the link between body & mind

NU SKIN AGELOC ME®

Nu Skin Enterprises, a global leader in anti-ageing skin care products and nutritional supplements introduces ageLOC Me®, a smart Skin Care System that provides a customised daily regimen based on individual preferences, environment, lifestyle and skin care needs.

ageLOC Me® brings together Nu Skin®'s most advanced anti-ageing skin care technology with a unique delivery device for a truly personalised daily skin care regimen. The device dispenses a customised regimen of anti-ageing product based on your skin assessment. The assessment, available as an application on your smartphone or via the website, determines skin care needs through a series of questions about you, your skin and your preferences to determine your specific set of products from about 2 000 combinations.

The anti-ageing products include one day moisturiser, one night moisturiser and three anti-ageing serums formulated to deliver comprehensive anti-ageing benefits.

Each day and night regimen is precisely dispensed to save time, reduce complexity and track usage for effective application and results – simply place your hand under the dispenser, palm upwards, and the device dispenses the product into your hand. Initial consumer studies indicate more than 90% of users found ageLOC Me® made their daily skin care regimen more convenient and made keeping to a skin care routine easier.

ageLOC Me® represents the convergence of three trends – the growing consumer demand for product customisation, the growth in anti-ageing skin care, and the advent of unique technology in our daily life. The result is a truly unique product that provides an equally individualised experience.
