

# ECOSPHERE WATER PURIFIER

## SYSTEM OVERVIEW

Clean, safe water is as close as your tap with the EcoSphere Water Purifier. Your body is comprised of approximately 60 percent water, so it's no surprise that the water you drink is essential to your overall health. In fact, water is vital to every bodily function and can affect your immune system, mental health, and energy level. Indeed, clean, safe water is the foundation of a healthy life. The problem is that water can be filled with contaminants, many of which you can't even see. That's why an efficient and effective water purification system is so important.

The EcoSphere Water Purifier eliminates harmful toxins, chemicals, and other impurities from tap water to provide clean, safe drinking water for you and your family to drink healthy. Our i4 Ultrapurification Technology is representative of our commitment to superior water purification. It consists of intelligent 4-stage Ultrapurification technology that supports overall wellness and helps you avoid health risks by effectively eliminating 99.9999-percent of bacteria. This intelligent 4-stage Ultrapurification technology is superior to carbon block filters or even microfiltration. Tap into the power of the EcoSphere Water Purifier. Drink healthy with clean, safe water!

## TARGET AUDIENCE

The EcoSphere Water Purifier is recommended for health-conscious consumers looking for cleaner, safer water to drink healthier and wanting to improve the water quality of their household.

## KEY FEATURES

- 4-Stage Ultrapurification Technology: 3in1 cartridge + UV Lamp
  - All-in-one cartridge lasts up to 12 months and features easy, convenient replaceability.
  - UV lamp is built into the device and does not require periodic replacement.

- Easy installation
  - Simply attach to faucet, plug in the device, and start drinking clean, safe, and healthy water.
- Clean, sleek, premium appearance
- Halal Certified

## BENEFITS

- i4 Ultrapurification Technology supports overall wellness and helps you avoid health risks from unsafe water consumption through an intelligent 4-stage Ultrapurification process.
- Removes 99.9999-percent of bacteria from water.
- Unique purification staging method maximizes the power of the EcoSphere Water Purifier.

## I4 ULTRAPURIFICATION TECHNOLOGY

The term i4 Ultrapurification Technology is short for Intelligent Four-Stage Ultrapurification Technology. The EcoSphere Water Purifier meticulously and systematically purifies water, making your water definitively clean and safe to drink. Each stage targets specific contaminants, large and small, without negatively disrupting water flow. The order of these steps is also key to removing a range of contaminants from water.

### STAGE 1: Polypropylene Pleated Prefiltration

The first stage of our Ultrapurification preps the water by removing larger particulates such as dust, sand, and sediment. The accordion-shaped, pleated arrangement of the polypropylene gives the filter more surface area than other prefilters, which also helps ensure the filter can efficiently process water without negatively impacting water flow.

### STAGE 2: Compressed Activated Carbon Block

The second stage involves a special form of carbon that has been meticulously crafted to provide the best carbon filtration possible.

# ECOSPHERE WATER PURIFIER

Each block is molded under enormous pressure and high heat to ensure that water flows through in a uniform and consistent manner. These blocks are especially effective at removing organic contaminants, chemicals, chlorine, lead, and particulates.

## STAGE 3: Polyether Sulfone Membrane

Next, water is passed through a special Polyether Sulfone (PES) membrane. This dense membrane is filled with microscopic pores ranging from 10nm to 100nm that trap a wide range of particles while letting water still flow unobstructed. This step truly seals our ultrafiltration claim, but we still go one step further to ensure that any residual microbiological contaminants are eliminated in our next and final stage.

## STAGE 4: Cold Cathode Lamp UV Light

UV light has the ability to completely eliminate and kill a wide variety of bacteria. Our EcoSphere Water Purifier uses superior UV technology that runs faster, longer, and cooler than typical tungsten UV lamps seen in many devices. What this means is that our state-of-the-art UV lamp is designed to run effectively without requiring any periodic replacement.

Our i4 Ultrapurification Technology truly sets the EcoSphere Water Purifier apart from competition and ensures that every drop of water from EcoSphere is clean and safe. Give your family peace of mind and clean, safe water right at home.

## USAGE

The EcoSphere Water Purifier can be used anytime you want clean, safe water. Simply touch the "Safe Drinking Water" button and turn on your water faucet.

## FREQUENTLY ASKED QUESTIONS

### What is EcoSphere?

EcoSphere products create clean, safe environments to protect you and your family's well-being for healthier home living.

### What is EcoSphere Water Purifier and what does it do?

EcoSphere Water Purifier is a high-tech device that plugs right into your home faucet. Using innovative ultrapurification technology, the purifier makes regular tap water incredibly clean and safe so that you can drink healthy. Protect your health with clean, safe water—free from everyday toxins, contaminants, and bacteria.

### What is ultrafiltration and is it better than microfiltration?

Ultrafiltration is a step above microfiltration, which is what you would get with just a carbon block system. The EcoSphere Water Purifier qualifies as an ultrafiltration device because it includes a special PES membrane used in conjunction with compressed carbon block technology.

### Where should I place the EcoSphere Water Purifier?

The device's sleek, clean, and premium design means it looks amazing right on your countertop. As long as you have access to your faucet and an electrical outlet nearby, you can place the EcoSphere Water Purifier anywhere in your home.

### Are there any restrictions to how I use the EcoSphere Water Purifier?

Do not place your purifier on its side or upside down. Do not twist any cords or hoses as this may cause your purifier to function incorrectly. The EcoSphere Water Purifier is intended for indoor use with a municipal water source and should not be placed in direct sunlight, stored in uncommonly hot/cold areas, or immersed in any kind of liquid.

### Can I use the water from EcoSphere for anything other than consumption?

The water collected using the EcoSphere Water Purifier is safe for any use, from drinking and cooking to bathing and cleaning. Whenever you need water that is clean and safe, look to your EcoSphere Water Purifier.

### How often should I replace the 3in1 cartridge?

The LED indicators on your device will inform you when your 3in1 cartridge's life cycle is nearing its end and when your 3in1 cartridge's life cycle has expired. See your user manual for more details on these specific LED indicators. The average replacement cycle is 12 months, depending on water quality from municipal water source. You can order new 3in1 cartridges at your local Nu Skin Distributor Center or online at [www.nuskin.com.ph](http://www.nuskin.com.ph).

### How do I change the 3in1 cartridge?

To replace the 3in1 cartridge, simply twist the top of the old cartridge approximately 1/4 turn counter-clockwise and lift it out. Slide the new cartridge in, press down slightly, and rotate it clockwise until the small dot on the cartridge lines up with the lock icon on the EcoSphere Water Purifier. No special tools are necessary and the entire process takes only seconds.

### Do I need to replace the UV lamp?

The UV lamp is built into the device and is designed to run effectively without requiring any periodic replacement.
